

PeakTech® 2525 PROD-ID: P 2525

[BACK](#)

3-Phasen-Motor-Rotation Tester with LED-display

Compact and handheld combitester designed according to safety standard CAT III 300 V in modern style, essential ideal for use in power installation. Enables contactless determination of the turning direction of unconnected motors or motors in the off status as well as of rotating fields, electronic 3-phase measurements and test of phase breakdowns.

- Robust alligator clips for problem-free connection
- Wide range of 3-phase power source from 120 ... 400 V AC resp. for rotary direction from 1 ... 400 V AC
- Determine the motor connection
- Safety: EN 61010-1; VDE-0411; VE-0413-7; CAT III 300 V; type of protection IP-40
- Accessories: test leads, alligator clips, carrying case, battery and operation manual

Input voltage motor rotary direction	1 ... 400 V AC
Input voltage phase direction	120 ... 400 V
Frequency range	45 - 70 Hz
Test current	< 3,5 mA/phase
Current pickup	20 mA
Operation voltage	9 V battery
Dimensions (WxHxD)	69 x 130 x 32 mm
Weight	130 g
EAN-13	4250569400476
